

UPMC announced plans for UPMC Presbyterian in 2017 as one of three new construction projects to be built within Pittsburgh. The tower's design captures UPMC's vision for providing an exceptional environment in which to deliver a quality focused patient experience while connecting patients, staff, and visitors to nature and to the neighborhood.

With patient experience at the center of this design and all that UPMC will do, the new hospital will:

- Have all private patient rooms leveraging progressive technology designed to enhance patient care in a healing setting.
- Unite UPMC's world-renowned clinical expertise for a full range of medical and surgical services, including signature programs for transplant, heart and vascular, and neurological care.
- Provide the latest technology to connect patients, their families, and the clinical team across facilities in real time with digital face-to-face consultations to meet critical needs.

PRIORITIES IN PROGRESS

LIFESTYLE VILLAGE

At approximately 30,000 square feet, Lifestyle Village will be a differentiator in acute medical centers and will position UPMC as a thought leader in advanced care and in connecting and advancing well-being for family, community, and staff members outside the inpatient and unit spaces. The funding priorities are design solutions that support the four guiding principles for Lifestyle Village:

1. Advance patient and family transitional care
2. Fuel a community of well-being
3. Support UPMC staff in work and life
4. Establish thought leadership in family-centered care
