

UPMC announced plans for UPMC Presbyterian in 2017 as one of three new construction projects to be built within Pittsburgh. The tower's design captures UPMC's vision for providing an exceptional environment in which to deliver a quality focused patient experience while connecting patients, staff, and visitors to nature and to the neighborhood.

With patient experience at the center of this design and all that UPMC will do, the new hospital will:

- Have all private patient rooms leveraging progressive technology designed to enhance patient care in a healing setting.
- Unite UPMC's world-renowned clinical expertise for a full range of medical and surgical services, including signature programs for transplant, heart and vascular, and neurological care.
- Provide the latest technology to connect patients, their families, and the clinical team across facilities in real time with digital face-to-face consultations to meet critical needs.

PRIORITIES IN PROGRESS

SPIRITUAL CENTER

The current UPMC Chapel will evolve into an inclusive Spiritual Center, offering a place for staff, families, and patients—no matter their spiritual or religious practice—to pray, meditate, or reflect. We learned that 66 percent of families prayed or meditated for self-care. Currently, only 10 percent attend services in a place of worship. The transition from chapel to a more inclusive center makes sense, and we hope to see the new space used more often.

The Spiritual Center is an open and flexible space for larger gatherings or for individual reflection in a quiet place. The ablution space next to the Spiritual Center supports those of the Islamic faith. The center itself includes office space for faith-based leadership, which will give them a central space for their daily work.

To ensure no one is left out, patients and family members who can't physically visit the Spiritual Center have inclusive access via integrated video and audio technology, which can be broadcast into the patient rooms.
